"The County that feeds Philadelphia." A market train starting for the City—160 baskets on each wagon.

# GLOUCESTER COUNTY

## A GREAT FARMING COUNTY

THE publishers of the FARM JOURNAL believe that we all need to know our home counties and our own neighbors better than we do.

This book is published for the use of the people of Gloucester County, in the belief that it will broaden the outlook of its readers, and reveal many things about the county and its people which will be of great interest and value to the people themselves.

Gloucester County has a total area of 326 square miles, and a population, according to the last census, of 37,368, which gives 115 persons to the square mile.

Of the total land area of 212,480 acres in the county, 139,687 acres, or 66 per cent., is in farms. There are in the county 2,252 farms, the average size being 62 acres.

According to the census of 1910, the value of all farm property in the county, including land, buildings, implements, domestic animals, poultry, etc., is \$12,202,382. This gives an average of \$5,418 per farm.

Of the men operating these 2,252 farms, 1,851, or 82 per cent., are native Americans, and 401, or 18 per cent., are foreign born; 44 are colored.

Of the 2,252 farms in the county, 1,563, or 69 per cent., are operated by their owners, and 651, or 31 per cent., by tenants. Of the tenant farmers, 47 per cent. pay cash rent and 53 per cent. work on shares.

Of the 1,562 farms operated by their owners, 648, or 42 per cent., are reported as free from mortgage debt, and 902, or 58 per cent., bearing mortgages.

The great crop of Gloucester County is potatoes. The latest census report gives the crop of sweet potatoes and yams for one year as 1,414,953 bushels, and of white potatoes 876,274 bushels, a total of 2,291,227 bushels.

Corn comes next, with a total crop for the year of 598,205 bushels. Of wheat the entire county produced in the year only 20,289 bushels.

In farming methods Gloucester is one of the most progressive counties of New Jersey, and as a natural result is one of the most prosperous. One evidence of this is the fact that the FARM JOURNAL has a circulation in the county of over 3,000, which is more than one subscriber to every farm. This we believe exceeds the circulation here of any other paper published.

There is no better index of the intelligence of farmers than the extent to which the standard agricultural papers are read by them.

The prosperity of Gloucester County farmers is further shown by the character of their houses, buildings, and farm equipment. The pictures in this book show this in the most graphic way, and will be found of deep interest to readers both within and without the county.

The public fountain at Glassboro, showing how the comfort of horses is cared for in South Jersey.

*If there is one lesson taught by history, it is that the permanent greatness of any State must ultimately depend more upon the character of its country population than upon anything else. No growth of cities, no growth of wealth, can make up for loss in either the number or the character of the farming population.*—THEODORE ROOSEVELT.

# Stokes' Seed Store

## The Home of Twenty Thousand American Gardens

THIS sign hung in front of our Market Street Store for several weeks during the Spring Season. Perhaps you saw it—lots of New Jersey folks did. We have some very good friends over the River. It is an interesting fact that the business from our New Jersey trade this past season was fifty per cent. ahead of the average volume of business for the preceding six years; and in this, Gloucester County did its full share. Such an increase is due to the confidence which the large growers have come to place in the house. Careful judgment and long experience is the strength behind the Stokes reputation.

*Are you one of the twenty thousand?*

**Fast On Level Roads—**

**Strong On The Hills**

**T**HIS NEW HENDERSON Luxury Car has jumped into immediate favor on account of its amazing luxury features and superior mechanical construction. We believe it has no equal at anywhere near the price.

Whether spinning noiselessly and swiftly along level roads or rushing surely up the hills, this new car made by the Hendersons of Indianapolis has no superior.

Every new proven feature of construction has been adopted. The Henderson is now a car selling at a moderate price which is "\$715 ahead of its time." It leaves nothing to be desired.

Study the condensed specifications here — then get the new catalogue giving the complete story.

# IRON AGE

## FARM, GARDEN and ORCHARD TOOLS

have been made in Gloucester Co., New Jersey, for more than three-fourths of a century, by men who have also been practical farmers and gardeners. At the present time, the Vice-President and the General Manager each own large farms on which they use modern machinery of all kinds,

including Iron Age tools, many of which are developed in that way. They are trade-

marked tools and widely

advertised in all parts of the world—they are known as "standard" in their line—to be depended on for the work claimed for them. Are not these the kind that you aim to use? Don't go away from home to buy good machines—the makers are handy to get at when you want a new machine quick or some needed repairs and they are always here.

One of 4 styles

No. 155 for heavy conditions

Hill and  
Drill  
Seeder, Double  
and Single  
Wheel  
Hoe

One seed piece  
in every hill and  
one only.

100 per cent.  
Potato  
Planter

### THE POTATO MACHINES INCLUDE

100 PER CENT. PLANTER (Improved Robbins).

RIDING CULTIVATORS, Pivot or Fixed Wheel. One Row or Two.

TRACTION SPRAYERS, 4 and 6 Row.

RIDERS, blade or disc (very helpful at digging time).

DIGGERS, 4 styles, to meet any conditions that a Digger can take care of.

### THE SPRAYERS

BUCKET SPRAYERS, with or without bucket.

KNAPSACK, galvanized or brass.

HORIZONTAL, 20 gallon Barrel Sprayer, mounted.

HORIZONTAL, 50 gallon Barrel Sprayer, ready for use in any wagon, cart, etc.

VERTICAL BARREL SPRAY PUMPS, with or without barrel and mounted if wanted.

50 100, 150 or 250 GALLON POWER SPRAYERS, mounted on skids or trucks, in any combination needed.

TRACTION SPRAYERS, in many combinations.

### POWER PUMPS

Single or Double Acting, one or two horse.

### GASOLINE ENGINES

1 to 5 H. P. Air-Cooled. 2 to 5 H. P. Combination Hopper or Air-Cooled.

Garden Wheel Hoes, Drills and Fertilizer Distributors. One Horse Harrows, Horse Hoes and Cultivators. Hay Rakes.

Trucker's Variety Planters, Row Makers, Row Markers, Riders, etc. Orchard Cultivators, 2 H. Walking Cultivators, etc.

Get our advertising matter, full set, or covering any machine. We want to serve our neighbors at least, and serve them as well as we know how.

BATEMAN MFG. CO.  
GRENLOCH, N. J.

## SPRAYING FORMULAS

**FUNGICIDES.**—Bordeaux mixture is made by taking three pounds of sulphate of copper, four pounds of quicklime, fifty gallons of water. To dissolve the copper sulphate, put it into a coarse cloth bag and suspend the bag in a receptacle partly filled with water. Next, slake the lime in a tub, and strain the milk of lime thus obtained into another receptacle. Now get some one to help you, and with buckets, *simultaneously* pour the two liquids into the spraying barrel or tank (see picture). Lastly, add sufficient water to make fifty gallons. It is safe to use this full-strength Bordeaux on almost all foliage—except, perhaps, on extra tender things, such as watermelon vines, peach trees, etc. For these it is wiser to use a half-strength mixture.

**FORMALIN.**—This is also called formaldehyde, and may be purchased at drug stores. Its principal use is to treat seed potatoes to prevent "scab." Soak the whole seed for two hours in a mixture of one-half pint formalin and fifteen gallons of cold water; dry the seed, cut, and plant in ground that has not recently grown potatoes.

**BORDEAUX COMBINED WITH INSECT POISON.**—By adding one-quarter pound of Paris green to each fifty gallons of Bordeaux, the mixture becomes a combined fungicide and insecticide. Or, instead of Paris green, add about two pounds of arsenate of lead. The advantages of arsenate of lead over Paris green are, first, it is not apt to burn foliage even if used in rather excessive quantities; and, second, it "sticks" to the foliage, etc., better and longer.

**INSECTICIDES.—ARSENATE OF LEAD.**—This is the best insecticide for chewing insects, and is for sale by seedsmen. Use about two pounds in fifty gallons of water.

**WHITE HELLEBORE.**—This, if fresh, may be used instead of Paris green in some cases—worms on currant and gooseberry bushes, for instance. (It is not such a powerful poison as the arsenites, and would not do so well for tough insects such as potato-bugs.) Steep two ounces in one gallon of hot water, and use as a spray.

**FOR SUCKING INSECTS.**—Now we come to another class of insecticides, suited to insects which suck a plant's juice but do not chew. Arsenic will not kill such pests; therefore we must resort to solutions which kill by *contact*.

**KEROSENE EMULSION.**—One-half pound or hard or one quart of soft soap; kerosene, two gallons; boiling soft water, one gallon. If hard soap is used, slice it fine and dissolve it in water by boiling; add the boiling solution (away from the fire) to the kerosene, and stir or violently churn for from five to eight minutes, until the mixture assumes a creamy consistency. If a spray pump is at hand, pump the mixture back upon itself with considerable force for about five minutes. Keep this as a stock. *It must be further diluted with water before using.* One part of emulsion to fifteen parts of water, is about right for lice.

**CARBOLIC ACID EMULSION.**—Made by dissolving one pound of hard soap or one quart of soft soap in a gallon of boiling water, to which one pint of *crude* carbolic acid is added, the whole being stirred into an emulsion. One part of this is added to about thirty-five parts of water and poured around the bases of the plants, about four ounces per plant at each application, beginning when the plants are set out and repeated every week or ten days until the last of May. Used to fight maggots.

**WHALE-OIL SOAP SOLUTION.**—Dissolve one pound of whale-oil soap in a gallon

of hot water, and dilute with about six gallons of cold water. This is a good application for aphid (lice) on trees or plants. For oyster-shell or scurfy scale use this spray in May or June or when the tiny scale lice are moving about on the bark.

**TOBACCO TEA.**—Place five pounds of tobacco stems in a water-tight vessel, and cover them with three gallons of hot water. Allow to stand several hours; dilute the liquor by adding about seven gallons of water. Strain and apply. Good for lice.

**LIME-SULPHUR MIXTURE.** — Slake twenty-two pounds of fresh lump lime in the vessel in which the mixture is to be boiled, using only enough water to cover the lime. Add seventeen pounds of sulphur (flowers or powdered), having previously mixed it in a paste with water. Then boil the mixture for about an hour in about ten gallons of water, using an iron but not a copper vessel. Next add enough more water to make, in all, fifty gallons. Strain through wire sieve or netting, and apply while mixture is still warm. A good, high-pressure pump is essential to satisfactory work. Coat every particle of the tree. This is the standard San Jose scale remedy, although some orchardists prefer to use the soluble oil sprays now on the market.

**PYRETHRUM, OR PERSIAN INSECT POWDER.**—It may be dusted on with a powder bellows when the plants are wet; or one ounce of it may be steeped in one gallon of hot water, and sprayed on the plants at any time. It is often used on flowers, in greenhouses, on vegetables, etc.

**BISULPHIDE OF CARBON.**—This is used to kill weevils in beans and peas, etc. It comes in liquid form and may be had of druggists. When exposed to the air it quickly vaporizes into a poisonous and explosive gas which is heavier than air and which will destroy all insect life. (Caution.—Do not inhale the vapor, and allow no lights near.)

Tobacco stems, tobacco dust, kainit, soot, freshly-slaked lime, dust, etc., are often used as insect *preventives*—in the soil around plants to keep away grubs, worms and maggots, or dusted on to discourage the visits of cucumber bugs, etc. (Note.—The first four are excellent fertilizers as well as insect preventives.)

Crows and blackbirds frequently pull up planted corn. The best preventive is to tar the seed, as follows: Put the seed into a pail and pour on enough warm water to cover it. Add a teaspoonful of coal-tar to a peck, and stir well. Throw the seed out on a sieve or in a basket to drain, and then stir in a few handfuls of land plaster (gypsum), or air-slaked lime.

**A NEW FUNGICIDE.**—Some orchardists are now using the following self-boiled lime-sulphur spray, instead of Bordeaux, claiming that it is less liable to spot or burn fruit and foliage: Put eight pounds of unslaked lump lime in a barrel; add enough water to cover. When the lime begins to heat, throw in eight pounds of flowers of sulphur. Constantly stir and gradually pour on more water until the lime is all slaked; then add the rest of the water to cool the mixture. About fifty gallons of water, in all, are required. Strain. Two pounds of arsenate of lead may be added, if desired, to the finished mixture, which then becomes a combined fungicide *and* insecticide, and may be used in the same manner as advised for Bordeaux-arsenate of lead. (Special note.—The self-boiled mixture is *not* the same as the lime-sulphur advised for San Jose scale, which is too strong for trees in foliage.)

If you do not care to bother with making spraying mixtures at home, they can be purchased, already prepared, of seedsmen. For only a few trees or plants, the extra cost of these factory mixtures is not great.

## SPRAYING CALENDAR

| PLANT                                                                                                   | FIRST APPLICATION                                                                                              | SECOND APPLICATION                                                                             |
|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| APPLE .....<br>(Scab, rot, rust, codling moth, bud moth, tent caterpillar, canker worm, curculio, etc.) | When buds are swelling, but before they open, Bordeaux.                                                        | If canker worms are abundant just before blossoms open, Bordeaux-arsenical mixture.            |
| ASPARAGUS .....<br>(Rust, beetles.)                                                                     | Cut off all shoots below surface regularly until about July 1st.                                               | After cutting ceases, let the shoots grow and spray them with Bordeaux-arsenical mixture.      |
| BEAN .....<br>(Anthracnose, leaf blight, weevil, etc.)                                                  | Treat the seed before planting with bisulphide of carbon. (See remarks.)<br>When third leaf expands, Bordeaux. | 10 days later, Bordeaux.                                                                       |
| CABBAGE .....<br>(Worms, lice, maggots, etc.)                                                           | Pyrethrum or insect powder.                                                                                    | 7-10 days later, repeat.                                                                       |
| CELERY .....<br>(Blight, rot, leaf spot, rust, caterpillars.)                                           | Half strength Bordeaux on young plants in hotbed or seedbed.                                                   | Bordeaux, after plants are transplanted to field. (Pyrethrum for caterpillars if necessary.)   |
| CHERRY .....<br>(Rot, aphid, slug, curculio, black knot, leaf blight, or spot, etc.)                    | As buds are breaking, Bordeaux; when aphid appear, tobacco solution or kerosene emulsion.                      | When blossoms drop, Bordeaux-arsenical mixture.                                                |
| CURRENT .....<br>GOOSEBERRY .....<br>(Worms, leaf blight.)                                              | At first appearance of worms, hellebore.                                                                       | 10 days later, hellebore, Bordeaux if leaf blight is feared.                                   |
| GRAPE .....<br>(Fungous diseases, Rose bugs, lice, flea beetle, leaf hopper, etc.)                      | In spring, when buds swell, Bordeaux.                                                                          | Just before flowers unfold, Bordeaux-arsenical mixture.                                        |
| MELONS .....<br>CUCUMBERS .....<br>(Mildew, rot, blight, striped bugs, lice, flea beetle, etc.)         | Bordeaux, when vines begin to run.                                                                             | 10-14 days, repeat. (Note: Always use half strength Bordeaux on watermelon vines.)             |
| PEACH .....<br>(Rot, mildew, leaf curl, curculio, etc.)                                                 | As the buds swell, Bordeaux.                                                                                   | When fruit has set, repeat. Jar trees for curculio.                                            |
| PEAR AND QUINCE ....<br>(Leaf blight, scab, psylla, codling moth, blister mite, slugs, etc.)            | As buds are swelling, Bordeaux.                                                                                | Just before blossoms open, Bordeaux. Kerosene emulsion when leaves open for psylla, if needed. |
| PLUM .....<br>(Curculio, black knot, leaf blight, brown rot, etc.)                                      | When buds are swelling, Bordeaux.                                                                              | When blossoms have fallen, Bordeaux-arsenical mixture. Begin to jar trees for curculio.        |
| POTATO .....<br>(Flea beetle, Colorado beetle, blight, etc.)                                            | Spray with Paris green and Bordeaux when about 4 in. high.                                                     | Repeat before insects become numerous.                                                         |
| TOMATO .....<br>(Rot, blight, etc.)                                                                     | When plants are 6 in. high, Bordeaux.                                                                          | Repeat in 10-14 days. (Fruit can be wiped if disfigured by Bordeaux.)                          |

NOTE.—For San Jose scale on trees and shrubs, spray with the lime-sulphur mixture in autumn after leaves fall, or (preferably) in early spring, before buds start. The lime-sulphur

## SPRAYING CALENDAR

| THIRD APPLICATION                                       | FOURTH APPLICATION                                                       | REMARKS.                                                                                                                                                                                                                |
|---------------------------------------------------------|--------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| When blossoms have fallen. Bordeaux-arsenical mixture.  | 8-12 days later, Bordeaux - arsenical mixture.                           | For aphid (lice) use one of the lice remedies mentioned elsewhere. Dig out borers from tree trunks with knife and wire. For oyster-shell scale, use whale-oil soap spray in June.                                       |
| 2-3 weeks later, Bordeaux-arsenical mixture.            | Repeat in 2-3 weeks.                                                     | Mow vines close to ground when they are killed by frost, burn them, and apply a mulch of stable manure.                                                                                                                 |
| 14 days later, Bordeaux.                                | 14 days later, Bordeaux.                                                 | For weevils: Put seed in tight box, put a cloth over seed, pour bisulphide of carbon on it, put lid on and keep closed for 48 hours. Use 1 oz. to 4 bus. of seed.                                                       |
| 7-10 days later, repeat.                                | Repeat every 10-14 days until crop is gathered.                          | Root maggots: Pour carbolic acid emulsion around stem of plants. Club root: Rotate crops; apply lime to soil; burn refuse; treat seed with formalin before planting.                                                    |
| 14 days later, repeat.                                  | 14 days later, repeat.                                                   | Rot or rust is often caused by hilling up with earth in hot weather. Use boards for summer crop. Pithy stalks are due to poor seed; or lack of moisture.                                                                |
| 10-14 days, Bordeaux.                                   | Hellebore, if a second brood of slugs appear.                            | Black knot: Dark fungous-looking bunches or knots on limbs. Cut off and burn whenever seen.                                                                                                                             |
| 10-14 days, repeat, if necessary.                       | 2 to 4 weeks later, repeat.                                              | Cane-borers may be kept in check by cutting out and burning infested canes.                                                                                                                                             |
| When fruit has set, Bordeaux - arsenical mixture.       | 2 to 4 week later, Bordeaux.                                             | For lice, use any of the lice remedies. For rose bugs, use 10 pounds of arsenate of lead and one gallon of molasses in 50 gallons of water, as a spray. Or knock the bugs into pans of kerosene every day.              |
| 10-14 days, repeat.                                     | 10-14 days, repeat.                                                      | Use lice remedies for lice. For striped bugs, protect young plants with a cover of mosquito netting over each hill. Or keep vines well dusted with a mixture of air-slaked lime, tobacco dust and a little Paris green. |
| When fruit is one-half grown, Bordeaux.                 | NOTE:—It is safer always to use half-strength Bordeaux on peach foliage. | Dig out borers. Cut down and burn trees affected with "yellows."                                                                                                                                                        |
| After blossoms have fallen. Bordeaux-arsenical mixture. | 8-12 days later, repeat.                                                 | Look out for "fire blight." Cut out and burn blighted branches whenever seen.                                                                                                                                           |
| 10-14 days later, repeat.                               | 10-20 days later, Bordeaux.                                              | Cut out black knot whenever seen.                                                                                                                                                                                       |
| Repeat for blight, rot and insects.                     | Repeat.                                                                  | To prevent scabby tubers, treat the seed with formalin before planting.                                                                                                                                                 |
| Repeat in 10-14 days.                                   |                                                                          | Hand-pick tomato worms.                                                                                                                                                                                                 |

mixture is a fungicide as well as a scale cure, and if it is used the *first* early Bordeaux spray may be omitted.
